KNOW YOUR KNEE

Understand the problem. Know your options.

HOW THE KNEE WORKS

The knee is a complex hinge joint that bears your weight, absorbs shock and allows smooth movement.

WHAT CHANGES WITH ARTHRITIS?

- Pain while walking, climbing stairs or sitting for long
- Stiffness, swelling and reduced movement
- Reduced walking distance or daily life limitation
- Pain that disturbs sleep or daily life
- Persistent pain despite medication, therapy or injections
- Difficulty in routine activities like sitting, standing or rising

WHEN TO CONSIDER KNEE REPLACEMENT?

Usually when arthritis causes persistent pain or functional limitation despite appropriate non-surgical treatment. The decision should consider symptoms, examination, function, imaging and your individual goals.

WHAT THE OPERATION DOES

Relieve pain. Restore function. Improve quality of life.

TOTAL KNEE REPLACEMENT (TKR)

Damaged knee surfaces are replaced with an artificial implant designed to restore smooth movement and stability. A small incision and muscle-sparing approach help protect your natural tissues.

IMPLANT MATERIALS

COMPONENT	COMMON MATERIAL / EXAMPLE
Femoral Component	Cobalt-Chromium or Titanium Alloy
Tibial Baseplate	Metal (Titanium or Cobalt-Chromium)
Bearing (Insert)	Highly Cross-linked Polyethylene
Patellar Component	Polyethylene Resurfacing When Appropriate
Fixation	Cemented or Cementless Based on Bone Quality & Factors

MUSCLE-SPARING APPROACH

We work between the natural muscle planes rather than cutting through muscles—preserving strength, reducing pain and supporting faster recovery.

CONVENTIONAL vs ROBOTIC-ASSISTED

Choosing the right technology for you.

FEATURE	CONVENTIONAL	ROBOTIC-ASSISTED
Surgical Approach	Standard Technique	Precision-Guided Planning
Pre-operative Planning	X-ray Based	3D CT Based Plan
Implant Positioning	Surgeon Guided	Robotic Assistance
Accuracy	Depends on Experience	Enhanced Precision & Alignment
Soft Tissue Balancing	Manual Assessment	Measured & Balanced
Recovery	Good Outcomes	Consistent Outcomes
Best Suited For	Most Patients	Complex Cases & High Precision Needs

THE KEY MESSAGE

A robot cannot replace clinical judgement, correct patient selection, implant choice, soft-tissue balancing and rehabilitation.

The best technology is the one that is appropriate for the patient.

ERAS & DAY-CARE JOINT REPLACEMENT

Enhanced Recovery After Surgery (ERAS)

ERAS is a multidisciplinary recovery pathway that begins before surgery and continues through discharge and rehabilitation. For carefully selected patients, same-day discharge may be possible for optimal safety and comfort.

DAY-CARE DOES NOT MEAN "NO HOSPITAL CARE"

It means appropriate hospital care followed by rapid recovery, safe discharge and continued recovery at home.

If safety criteria are not met, the patient remains in hospital.

WHO MAY BE SUITABLE?

- ✓ General medical and anaesthetic fitness
- ✓ Motivated patient and supportive home environment
- ✓ Stable home environment and responsible caregiver
- ✓ Ability to mobilize safely with adequate pain control

SAFETY COMES FIRST

- ★ Same-day discharge is only considered when the patient has achieved the required recovery checkpoints.
- ★ If not, continued hospital care is appropriate.

YOUR RECOVERY JOURNEY

We partner with you at every step.

RECOVERY TIMELINE

Before Surgery

Clinical evaluation, optimize health and prepare your home

Day of Surgery

Your surgery team works for your safety

Before Home

Sitting, standing and walking with safety checks

At Home

Continue exercises with at home, build strength

Beyond

Return to activities, better mobility and confidence

EARLY PHYSIOTHERAPY PRIORITIES

- ✓ Ankle Pumps
- ✓ Quadriceps Activation
- ✓ Knee Slides
- ✓ Sitting & Standing Practice
- ✓ Short Walks
- ✗ Progress Walking with Support

5 QUESTIONS TO ASK YOUR SURGEON

- Do I really need a knee replacement?
- Why conventional or robotic surgery for me?
- What surgical approach will you use and why?
- What is my rehabilitation plan?
- What is my rehabilitation goal?

**GOAL IS NOT JUST TO REPLACE YOUR KNEE –
IT IS TO HELP YOU GET BACK TO YOUR LIFE.**
