Robotic-Assisted

ERAS & Day-Care

DO YOU NEED A HIP REPLACEMENT?

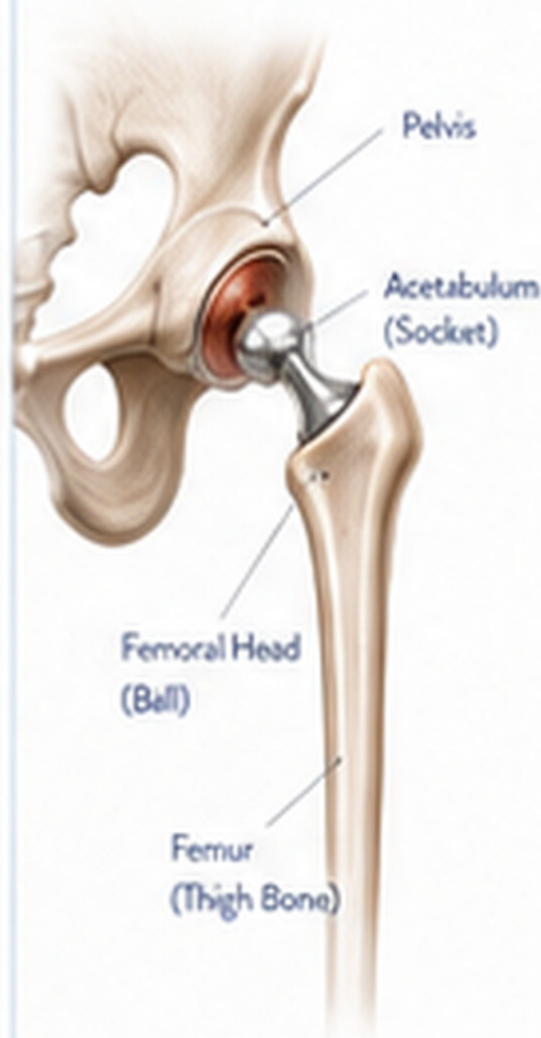

Relieve pain. Restore movement. Reclaim life.

WHEN TO CONSIDER HIP REPLACEMENT

- ✓ Hip or groin pain affecting daily activities
- ✓ Pain while walking, climbing stairs or sitting
- ✓ Stiffness and reduced range of motion
- ✓ Pain at night or even at rest
- ✓ Pain not relieved with medication or therapy
- ✓ Difficulty with routine activities

If pain limits your quality of life despite non-surgical care, it may be time to consider hip replacement.

HIP ANATOMY

TYPES OF HIP REPLACEMENT

Total Hip Replacement (THR)
Replaces both the ball and socket.

Partial Hip Replacement (Hemiarthroplasty)
Replaces only the femoral head.

GOAL: A PAIN-FREE LIFE

Better movement and improved quality of life.

ANTERIOR vs POSTERIOR APPROACH

Two paths to the same goal – your pain-free life.

ANTERIOR APPROACH

- ✓ Muscle-sparing approach
- ✓ Smaller incision at the front
- ✓ Lower risk of dislocation
- ✓ Less post-op pain
- ✓ Faster early recovery

POSTERIOR APPROACH

- ✓ Traditional approach
- ✓ Incision at the back of the hip
- ✓ Well-established technique
- ✓ Excellent long-term results
- ✓ Suitable for complex cases

AT A GLANCE	ANTERIOR	POSTERIOR
Muscle cutting	Minimal	More
Dislocation risk	Lower	Higher
Hospital stay	Shorter	Slightly longer
Early mobility	Faster	Gradual
Scar location	Front of hip	Back of hip
Ideal for	Most patients	Complex / Revision cases

Your surgeon will recommend the best approach based on your condition, anatomy and lifestyle.

IMPLANT MATERIALS & ROBOTIC ASSISTANCE

Precision implants. Smarter surgery.

IMPLANT MATERIALS

- ✓ High-quality materials for strength, durability and biocompatibility
- ✓ Metal-on-Polyethylene or Ceramic-on-Polyethylene or Ceramic-on-Ceramic options
- ✓ Long-lasting performance with advanced designs

ROBOTIC-ASSISTED SURGERY

- ✓ 3D pre-operative planning
- ✓ Real-time accuracy
- ✓ Better implant positioning
- ✓ Potential for improved outcomes and longevity

BENEFITS FOR YOU

Precision
& Accuracy

Less Pain
& Trauma

Faster
Recovery

Better Function
& Longevity

DAY-CARE HIP REPLACEMENT

Advanced care. Faster recovery.

ERAS combines modern surgical techniques, anaesthesia, multimodal pain management, early mobilisation and checkpoint-based discharge. Healthy, carefully selected patients may return home the same day once they are medically ready.

THE ERAS PATHWAY

WHO MAY BE SUITABLE?

- ✓ Medically stable patients
- ✓ Adequate home support
- ✓ Motivated for early recovery
- ✓ No uncontrolled medical conditions

SAFETY COMES FIRST

- ✓ Careful patient selection
- ✓ Advanced pain management
- ✓ Continuous monitoring
- ✓ 24/7 support if needed

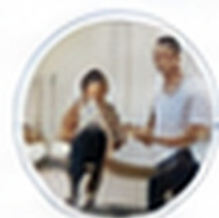

Day-care hip replacement is safe, effective and convenient for appropriate patients.

YOUR RECOVERY JOURNEY

We partner with you at every step.

RECOVERY TIMELINE

Day of Surgery

Walk with support
same hours

Week 1-2

Pain reduces,
mobility improves

Week 3-6

Walk independently,
daily activities

Week 6-12

Strength builds,
return to routine

3-6 Months

Resume low-impact
activities

PHYSIOTHERAPY DIRECTIONS

- ✓ Walk daily – short & frequent walks
- ✓ Strengthening & flexibility exercises
- ✓ Follow home exercise plan strictly
- ✓ Avoid deep squatting & cross-leg sitting
- ✓ Climb stairs with support initially

COMMON QUESTIONS

- Q.** How long does the implant last?
A. 15 – 20 + years with modern implants and care.
- Q.** When can I return to work?
A. Usually after 4 – 6 weeks (as advised).
- Q.** Will I be able to drive again?
A. Yes, in most cases after full recovery.

Our goal is not just surgery.
It's getting you back to
the life you love.

*Compassion. Precision.
Excellence.*
